

A cooperation with

# ULDsolutions

*We offer customers a wide range of comprehensive, competitive and efficient ULD services.*

Unit Load Devices, or ULD for short, guarantee the safe, speedy and low-price handling of large quantities of baggage, freight and mail.

But the operation and maintenance of these containers and pallets are costly and demand extensive know-how.

Airlines operating at Frankfurt Airport can now take advantage of a new service, ULDsolutions, offered by Fraport and ASG Airport Service GmbH, a subsidiary of Fraport and service company WISAG. ULDsolutions offers customers a wide range of comprehensive, competitive and efficient ULD services.

## *Service range of ULDsolutions*

- ULD optimized utilization and storage
- ULD maintenance and repair (EASA 145 certified)
- ULD rental and lease
- ULD sales and procurement – new & pre-owned
- ULD fleet management
- ULD ad-hoc short term lease out of buffer stock at FRA

*All repairs and certifications are performed exclusively by ASG Airport Service Gesellschaft mbH, Fraport's EASA 145 certified partner company.*

### ***Highly qualified staff***

Highly qualified technicians repair, inspect and assemble all types of airfreight containers and pallets. They are qualified under the standards set by the German Civil Aviation Authority (Luftfahrtbundesamt) or the US Federal Aviation Administration (FAA) airframe and power plant mechanics. The organization is fully certified and operates in accordance with the standards specified in the EASA Part 145 regulation under the authorization number DE.145.0220.

### ***Secure and close repair location***

ULDsolutions operates in the companies' own repair facility located in the northeast ramp area of Frankfurt Airport. This guarantees that the assets will only be handled by personnel that have met stringent security requirements. The airside location also cuts down transport and loading times to and from the repair facility, allowing a maintenance turnaround of less than 24 hours.

### ***Rental and lease***

ULDsolutions owns an extensive stock of containers and pallets of all kinds for rent or lease, including lease purchase. This means short-term peaks can be covered, an imbalance compensated for or parts in general be leased rather than owned. Comprehensive buffer stock is available which can be used if additional ULD are required shortly before take-off.

### ***Sales and Procurement***

ULDsolutions offers new as well as pre-owned units, which are generally overhauled at attractive prices. Customers benefit from price advantages generated by the purchase of large quantities.

### ***Fleet Management***

More than 6,500 units are handled on average every day at Frankfurt Airport. Containers and pallets are provided, picked up, stored and managed in a timely manner. Modern software and an experienced workforce make it possible to determine optimum storage quantities, identify excess units and avoid under or over coverage.
